

- Whether SMS text messaging should be included as an eligible service; -

No SMS messaging should not allowed to be eligible, call them it's actually cheaper.

- Whether firewall services should be included as eligible;

Firewall services should remain eligible, it's part of the network and is needed for security purposes to protect what we can purchase through the e-rate program.

- Whether E-rate should be extended to include anti-virus and anti-spam software;

This software is free on the internet if you wish to use the free stuff; I believe there would be abuse here, so no, not eligible

- Whether the FCC should reverse its 2006 decision that made videoconferencing scheduling system ineligible;
- Whether telephone-based mass notification systems should be added to the eligibility list;

This is a luxury, not a necessity. It would be nice for notifications to be mass capable, but again abuse here would be an issue.

- Whether to make wireless Internet access eligible for funding when such access is used for educational purposes on or off campus.

Wireless internet for laptops could be a great idea, especially for communications back and forth to school. Blackberry's and such are great communication tools and those are wireless smart phones. They are capable of internet access and is not too expensive, if you can afford the phone, you should be able to afford the package that goes along with it.
